SprayMax 2K Activation

shake well for 2 min

- **Step 1** Before activation, shake can thoroughly for 2 minutes once the mixing balls are heard.
- **Step 2** Remove the red button from the cap and place it straight on the pin in the bottom of the can base.
- **Step 3** Press can down with even pressure on a firm surface until you hear a cracking sound.
- **Step 4** After the hardener has been released inside the can, shake again for 2 minutes, starting from the audible sound of the mixing balls. Shaking ensures a homogeneous mixture of product, hardener and propellant. Remove and dispose of the red button to ensure it is immediately apparent the hardener has been released and cannot be confused with a new can.
